

Pepper's Platform as a Service (PaaS) provides enterprises access to a robust, fully configurable IoT platform featuring:

INTEGRATIONS

Any device, any technology, any RF, any use case, any service

CLOUD-BASED CAPABILITIES

- Video
- Voice
- Alerts
- Rules
- AI
- 250+ microservices

SERVICES

Add revenue-generating services like installation, warranty, and more

DATA

Owned and controlled by the enterprise and the end-user

STRATEGIC ALIGNMENT

A white-label approach designed with and for enterprises

SECURITY

Enterprise-grade cybersecurity and data protections, no foreign access

FLEXIBILITY

Single device to complex gateway solutions - address bigger market

CONSUMER EXPERIENCES

World-class UX via the Pepper OS framework

VIDEO

The most secure, reliable and lowest latency solution on the market

Pepper is the leading consumer IoT platform enabling corporations to deliver the latest in smart solutions to their customers.

Consumer Demand

The consumer Internet of Things movement is exploding. Pepper helps companies satisfy this insatiable demand for connected devices and life-enhancing services.

Pepper enables elegant user experiences while protecting against cybersecurity threats and foreign access into our homes and connected lives.

Enterprise Need

Virtually every US consumer-facing corporation seeks ways to employ consumer IoT technologies and services to enhance core business initiatives.

Pepper reduces the cost and simplifies the complexity in IoT solution design, development, deployment, and ongoing management of these complex white-label services.

\$30B, the annual consumer IoT service revenues generated in the US in 2025, not including hardware.

SPEED TO MARKET • NO CAPEX • OWNER ECONOMICS

Pepper, a full-service platform for the Internet of Everything.
